

Invalid “colbibtex” example

One may wrongly use the entry already collapsed in its bare form, like

The Higgs boson, so-called after Ref. [1], is discovered in 2012 at the LHC [2]. The paper by ATLAS collaboration [3] was posted on arXiv at 11:59:59 GMT on 31 July, while that by CMS [4] was at 13:27:18 GMT. The particle is proposed in, e.g., Refs. [1, 5].

In this case, both “collapsed” and ”pure” entries appear. **TODO: colbibtex should raise warnings.**
