

“colbibtex” example (mcite mode)

The Higgs boson is discovered in 2012 at the LHC [1, ?].

This is an example with *colbibtex* script. The source code is the same as `example_mcite.tex`. The compile is a bit complicated:

```
pdflatex example_mcite
colbibtex example_mcite
pdflatex example_mcite
pdflatex example_mcite
```

or

```
latexmk -e "\$bibtex='colbibtex'" example_mcitemode
```

TODO: Currently this mode is not working well... should be fixed....?
